First, it can help you clone a removable device by copying its contents and generating an image file, while its other function enables it to write an IMG file to the USB drive. The connected USB storage media is automatically detected so that you can select the desired drive from a drop-down list. Once you do so, you can proceed to browse for the IMG file you want to process (or, in a case of a backup operation, selecting the location and the name of the image file that will be generated).
